Benefits:

The main benefits that I realized are AMQP is easy to setup and manage compared to http. And, in topic based communication you get relevant data and it also provides scalability and loose coupling to your application.

Main Learning:

- How to manage microservices.
- Basics of message-queues and different exchange types of RabbitMQ
- How to implement topic-based publish-subscribe communication for message routing
- Realize the benefits of asynchronous communication
- Learn how to use volumes in Docker Compose
- File writing and reading in nodejs
